the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion, and the number of people aged 65 and over has increased from 0.2 billion to 0.4 billion (United Nations, 1999).

There are a number of reasons why the world population is ageing. First, the number of people who survive to old age has increased. This is due to a number of factors, including improved medical care, better nutrition, and a decline in the incidence of infectious diseases. Second, the number of people who are born has decreased. This is due to a number of factors, including a decline in the birth rate, a decline in the number of children who survive to old age, and a decline in the number of people who are born.

The ageing of the world population has a number of implications. First, it will increase the demand for health care and social services. Second, it will increase the demand for housing and transportation. Third, it will increase the demand for retirement income. Fourth, it will increase the demand for long-term care. Fifth, it will increase the demand for education and training. Sixth, it will increase the demand for employment opportunities.

The ageing of the world population is a global phenomenon that will have a significant impact on the world in the 21st century. It is important that we understand the implications of this phenomenon and that we develop strategies to address the challenges it presents. This paper will discuss the implications of the ageing of the world population and will propose strategies to address the challenges it presents.

2. Methods

2.1. Data

The data for this study were obtained from the United Nations Population Division (UNPD). The UNPD is a part of the United Nations Secretariat and is responsible for providing demographic data to the United Nations. The data for this study were obtained from the UNPD's *World Population Prospects* (WPP) database. The WPP database contains data on the world population, including the number of people in each age group, the sex ratio, and the life expectancy. The data for this study were obtained from the WPP database for the year 1999.
