the 1990s, the incidence of *S. flexneri* has increased in the United Kingdom [10]. In the United States, *S. flexneri* has been reported as the most common serotype in children with acute bacterial dysentery [11].

There is a paucity of data on the epidemiology of *S. flexneri* in the United Kingdom. The only published study of *S. flexneri* in the United Kingdom was by Smith *et al.* [12], who reported the isolation of 10 *S. flexneri* strains from patients with acute bacterial dysentery in 1987. The serotypes were *S. flexneri* 3, 3a, 3b, 3c, 3d, 3e, 3f, 3g, 3h and 3i.

The purpose of this study was to determine the serotypes of *S. flexneri* isolated from patients with acute bacterial dysentery in the United Kingdom in 1997. We also determined the serotypes of *S. flexneri* isolated from patients with acute bacterial dysentery in the United Kingdom in 1998, to determine whether there was any change in the serotypes of *S. flexneri* isolated from patients with acute bacterial dysentery in the United Kingdom in 1997 and 1998.

METHODS

Study area

The study was conducted in the United Kingdom. The United Kingdom is a country in Europe, comprising Great Britain and Northern Ireland. The United Kingdom has a population of approximately 58 million people. The United Kingdom is a member of the European Union.
