the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion, from 1.1 billion in 1980 to 2.3 billion in 1999. The number of people aged 15 years and over has increased by 1.1 billion, from 1.1 billion in 1980 to 2.2 billion in 1999.

There are a number of reasons why the world population is growing so rapidly. One of the main reasons is that the number of children born to each woman has increased. This is due to a number of factors, including improved medical care, increased access to contraception, and a shift in cultural values.

Another reason why the world population is growing so rapidly is that the number of people who are surviving into old age has increased. This is due to a number of factors, including improved medical care, increased access to health care, and a shift in cultural values.

There are a number of challenges that the world population growth poses. One of the main challenges is that it is putting a strain on the world's resources. This is because there are a limited number of resources, such as food, water, and energy, and the growing population is increasing the demand for these resources.

Another challenge is that it is putting a strain on the world's environment. This is because the growing population is increasing the demand for land, which is being converted into agricultural land. This is leading to deforestation and the loss of biodiversity.

There are a number of ways in which the world population growth can be managed. One way is to improve the world's resources. This can be done by increasing the efficiency of resource use and by developing new resources.

Another way is to improve the world's environment. This can be done by reducing the demand for land and by protecting the world's biodiversity.

There are a number of other ways in which the world population growth can be managed. These include improving the world's health care system, increasing access to education, and promoting a shift in cultural values.

The world population growth is a complex issue that requires a number of different approaches to manage it. It is important that we work together to find solutions that will ensure a sustainable future for all of us.

There are a number of challenges that the world population growth poses. One of the main challenges is that it is putting a strain on the world's resources. This is because there are a limited number of resources, such as food, water, and energy, and the growing population is increasing the demand for these resources.

Another challenge is that it is putting a strain on the world's environment. This is because the growing population is increasing the demand for land, which is being converted into agricultural land. This is leading to deforestation and the loss of biodiversity.
